

Cochrane UK needs you!

Can you help us find out whether our regular evidence round-up blogs are useful and how we can make them better?

These blogs are a way of bringing you news of the latest evidence from Cochrane, relevant to your professional group. Unlike our other blogs, these do not go into detail about the topics and the evidence, nor do they provide a personal or professional reflection. Rather, they provide a brief summary of recently-published [Cochrane Reviews](#) and flag up related products and resources, as well as news and opportunities.

We want to make sure we are providing something that is useful to you in your practice. To do this, we need your help.

We are looking for nurses, clinical support staff and student nurses.

If you can spare a few minutes, it would be great if you could share your thoughts in a comment on this blog (simply post a comment at the bottom of the page). There are some questions below you might like to consider.

If you can spare a bit longer, and you are based in the UK, please consider helping us with the task below which involves you reading two of these blogs and then chatting with either Sarah or Selena on Zoom for up to 30 minutes at a date and time convenient to you. If you are interested, please get in touch via feedback@evidentlycochrane.net.

We want to know what *you* think (this is not a test!)

The task:

Please read this blog and the previous blog in the series: [a round up of new evidence and resources – March 2022](#). Do this in whatever way you naturally would (for example, concentrating on the bits relevant to you). While you are reading, please think about these questions:

- What do you think about the topic coverage? Are the topics right? Are we missing things? Please note the topics vary, depending on what new evidence we have to share.
- Is the blog organised in a way that is useful and makes sense to you?
- What do you think of the information that is given? For example, would you like more, less, or different detail?
- What would you do with any of this information? (For example, share it with colleagues).
- Where do you normally look for evidence?
- How often would you like to see these blogs published?

- Are there any other changes you would like to suggest?

If it is helpful for you to have evidence of your contribution to helping us at Cochrane UK improve our evidence products, we can provide this.

Thank you!
